Practical Linux

Practical 1

Connecting to Other Machines

Setup

Open `http://www.chiark.greenend.org.uk/~sgtatham/putty/latest.html` in your browser.

Download the **32-bit** version of **putty.exe**.
(Alternative binary files, the SSH and Telnet client itself).

Connect to the education server

Run the downloaded **putty.exe** executable.

Introduce the education server IP address **145.88.35.11** as destination.

Make sure that the **port number** is set to **22** and that **SSH** is selected as **connection type**.

Start the connection. Press "Yes" if the security alert pops in.

Introduce your provided **username** and press enter.

Introduce your provided **password** and press enter.

You should now be connected to the education server.
