

Practical Linux

Core 2

Department of Human Genetics

Outline

- Manipulate files and directories
- Inspect files
- Edit files
- Disk usage
- File name expansion
- Search and count in/for files
- Output redirection

Manipulate Files and Directories

```
mkdir [option].. [directory]...
```

Create new `directories`.

```
cp [option]... [source]... [destination]
```

Copies the `source` to the `destination`.

```
mv [option]... [source]... [destination]
```

Move or rename `source` to `destination`.

```
rm [options]... [file/directory]...
```

Remove specified `files` or `directories`.

Manipulate Files and Directories

```
mkdir [option].. [directory]...
```

Create new `directories`.

```
cp [option]... [source]... [destination]
```

Copies the `source` to the `destination`.

```
mv [option]... [source]... [destination]
```

Move or rename `source` to `destination`.

```
rm [options]... [file/directory]...
```

Remove specified `files` or `directories`.

Removing, i.e., deleting, erasing, is forever - no trash bin.

Manipulate Files and Directories

Create directories

```
$ mkdir
```

Manipulate Files and Directories

Create directories

```
$ mkdir project_x
```

Manipulate Files and Directories

Create directories

```
$ mkdir project_x  
$
```

Manipulate Files and Directories

Create directories

```
$ mkdir project_x  
$ ls
```

Manipulate Files and Directories

Create directories

```
$ mkdir project_x  
$ ls  
learn project_x tools  
$
```

Manipulate Files and Directories

Create directories

```
$ mkdir data/human doc src
```

```
mkdir: cannot create directory 'data/human': No such file  
or directory
```

```
$
```

Manipulate Files and Directories

Create directories

```
$ ls  
doc  src  
$
```

Manipulate Files and Directories

Create directories

```
$ mkdir -p data/human  
$ ls  
data  doc  src  
$
```

Manipulate Files and Directories

Create directories

```
$ ls data  
human  
$
```

Manipulate Files and Directories

Copy files

```
$ cp
```

Manipulate Files and Directories

Copy files

```
$ cp ../../Documents/templates/README
```

Manipulate Files and Directories

Copy files

```
$ cp ../../Documents/templates/README doc
```

Manipulate Files and Directories

Copy files

```
$ cp ../../Documents/templates/README doc
$ ls doc
README
$
```

Manipulate Files and Directories

Copy files recursively

```
$ cp -r ../../Downloads/data data
```

Manipulate Files and Directories

Copy files recursively

```
$ cp -r ../../Downloads/data data
$ ls data
data human
$
```

Manipulate Files and Directories

Copy files recursively

```
$ ls data/data  
flow.gb chr1.gb  
$
```

Manipulate Files and Directories

Move files

```
$ mv data/data/chr1.gb data/human
```

Manipulate Files and Directories

Move files

```
$ mv data/data/chr1.gb data/human
$ ls data/human
chr1.gb
$
```

Manipulate Files and Directories

Move files

```
$ ls data/data  
flow.gb  
$
```

Manipulate Files and Directories

Rename files

```
$ mv data/data data/flowers
```

Manipulate Files and Directories

Rename files

```
$ mv data/data data/flowers  
$ ls data  
flowers human  
$
```

Manipulate Files and Directories

Rename files

```
$ mv data/flowers/flow.gb data/flowers/tulips.gb
```

Manipulate Files and Directories

Rename files

```
$ mv data/flowers/flow.gb data/flowers/tulips.gb  
$ ls data/flowers  
tulips.gb  
$
```

Manipulate Files and Directories

Remove files and directories

```
$ rm ../../Downloads/data
```

Manipulate Files and Directories

Remove files and directories

```
$ rm ../../Downloads/data
```

```
rm: cannot remove '../../Downloads/data': Is a directory
```

```
$
```

Manipulate Files and Directories

Remove files and directories

```
$ rm -r ../../Downloads/data  
$ ls ../../Downloads  
$
```

Manipulate Files and Directories

Refer to the current directory

```
$ cp ../../important/roses .
```

Manipulate Files and Directories

Refer to the current directory

```
$ cp ../../important/roses .  
$ ls  
roses  
$
```

Manipulate Files and Directories

Run an application

```
$ ./script.sh  
Hello gulliver! Job done!  
$
```

Manipulate Files and Directories

Run an application

```
$ ../../tools/compare
```

```
Comparison performed: X is different than Y.
```

```
$
```

Quiz 1

What is the output of the closing `ls` command from below?

```
$ pwd
/home/zorro/data
$ ls
samples.dat
$ mkdir processed
$ mv samples.dat processed
$ cp processed/samples.dat ../samples-saved.dat
$ ls
```

1. samples-saved.dat processed
2. samples.dat processed
3. processed
4. samples-saved.dat

Quiz 1

What is the output of the closing `ls` command from below?

```
$ pwd  
/home/zorro/data  
$ ls  
samples.dat  
$ mkdir processed  
$ mv samples.dat processed  
$ cp processed/samples.dat ../samples-saved.dat  
$ ls
```

1. `samples-saved.dat processed`
2. `samples.dat processed`
3. `processed`
4. `samples-saved.dat`

Inspect Files

```
cat [option]... [file]...
```

View the entire content of the input `files`.

```
less [file]...
```

View the `file` with scrolling allowed.

```
head [option]... [file]...
```

Print the first 10 lines of each `file`.

```
tail [option]... [file]...
```

Print the last 10 lines of each `file`.

Inspect Files

cat

`cat [option]... [file]...`

View the entire content of the input `files`.

```
$ cat /etc/passwd
root:x:0:0:root:/root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin
sys:x:3:3:sys:/dev:/usr/sbin/nologin
sync:x:4:65534:sync:/bin:/bin/sync
...
```

Inspect Files

less

`less [file]...`

View the `file` with scrolling allowed.

Press `h` to get help, `q` to exit, and `/` followed by text to search.

```
$ less /etc/passwd
```

```
root:x:0:0:root:/root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin
sys:x:3:3:sys:/dev:/usr/sbin/nologin
sync:x:4:65534:sync:/bin:/bin/sync
...
```

Edit Files

nano

A simple and easy text editor.

Open file to edit with:

`nano file`

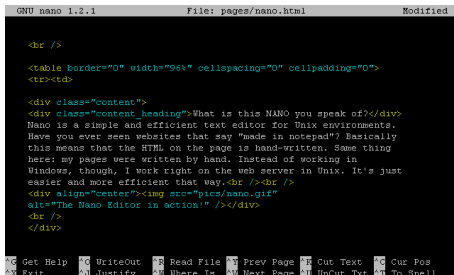

The screen consists of:

- A header at the top.
- The text of the file being edited in the middle.
- A commands menu at the bottom.

Note that all keystrokes enter text into the file being edited.

Exception:

- Control (**Ctrl**, shown as **^**) and Meta (**Alt** or **Cmd**, shown as **M-**) sequences.

The screenshot shows the nano text editor interface. At the top, a status bar displays 'GNU nano 1.2.1', 'File: pages/nano.html', and 'Modified'. The main editing area contains HTML code for a table and a content div. The code includes a table with a border and a content div with a heading and a paragraph. The bottom of the screen shows a commands menu with various shortcuts like '^G Get Help', '^O WriteOut', '^R Read File', etc.

```
GNU nano 1.2.1      File: pages/nano.html      Modified

<br />

<table border="0" width="96%" cellspacing="0" cellpadding="0">
<tr><td>

<div class="content">
<div class="content_heading">What is this NANO you speak of?</div>
Nano is a simple and efficient text editor for Unix environments.
Have you ever seen websites that say "made in notepad"? Basically
this means that the HTML on the page is hand-written. Same thing
here: my pages were written by hand. Instead of working in
Windows, though, I work right on the web server in Unix. It's just
easier and more efficient that way.<br /><br />
<div align="center"></div>
<br />
</div>

^G Get Help  ^O WriteOut  ^R Read File  ^Y Prev Page  ^T Cut Text   ^C Cur Pos
^X Exit      ^U Justify   ^W Where Is   ^V Next Page  ^I UnCut Txt  ^S To Spell
```

nano

Highlithing, copying, cutting, and pasting:

- **Ctrl-^**: enter/exit highlight mode; use arrow keys next.
- **Meta-^**: copy (once highlighted).
- **Ctrl-k**: cut (once highlighted or cuts entire line if not).
- **Ctrl-u**: paste.

Search, undo, and redo:

- **Ctrl-w**: search for keyword.
- **Meta-u**/**Meta-e**: undo / redo.

Help, save, and exit:

- **Ctrl-g**: nano help; press **Ctrl-x** to exit the help mode.
- **Ctrl-o**: save file (write out).
- **Ctrl-x**: exit nano.

Disk Usage

du

`du [option]... [file/directory]...`

Summarize disk usage of the set of `files/directories`.

Some options:

- `-c, --total`
Produce a grand total.
- `-h, --human-readable`
Print sizes in human readable format (e.g., 1K 234M 2G).

```
$ du -ch /etc/passwd
4,0K /etc/passwd
4,0K total
```

File name expansion

Wildcards are used to substitute characters:

- **?** - represent any single character.
- ***** - represent zero or more characters.

Globbering

File name expansion

Wildcards are used to substitute characters:

- **?** - represent any single character.
- ***** - represent zero or more characters.

```
$ ls
DC_000100.jpg  Documents      Downloads      flower.jpg
humans         genes          Music          programs
...
projects       Templates      Videos        Zagreb.jpg
$ ls *.jpg
DC_000100.jpg  flower.jpg     Paris.jpg      Zagreb.jpg
```

Escape **wildcards** with the backslash `\`.

Quiz 2

What is the output of the closing `ls` command from below?

```
$ ls -F
austria.gif  france.jpg  italy.gif  italy.jpg1  spain.jpg2
belgium.gif  gif/        italy.jpg  spain.gif
$ mv *.gif gif
$ rm *.jpg?
$ ls
```

1. The same as the first `ls`.
2. `austria.gif` `gif` `italy.gif` `spain.gif`
3. `france.jpg` `gif` `italy.jpg`
4. `gif` `italy.jpg1` `spain.jpg2`

Quiz 2

What is the output of the closing `ls` command from below?

```
$ ls -F
austria.gif  france.jpg  italy.gif  italy.jpg1  spain.jpg2
belgium.gif  gif/        italy.jpg  spain.gif
$ mv *.gif gif
$ rm *.jpg?
$ ls
```

1. The same as the first `ls`.
2. `austria.gif` `gif` `italy.gif` `spain.gif`
3. `france.jpg` `gif` `italy.jpg`
4. `gif` `italy.jpg1` `spain.jpg2`

Search and Count

locate

`locate` `[option]`... `[pattern]`

Outputs every path that contains the provided `pattern`.

```
$ locate zip
/bin/bunzip2
/usr/bin/zip
/var/lib/dpkg/info/bzip2.list
...
$ locate /usr/*zip
/usr/bin/zip
/usr/bin/gpg-zip
/usr/lib/klibc/bin/gzip
...
```

Search and Count

find

`find [path]... [option]... [expression]`

Search for files and directories based on the given `expression`.
Many options and ways to specify `expression` - check man page.

Example:

Search for all files ending with '.fasta' in directory 'mascot' that where last modified more than 2 years ago:

```
$ find /nfs/mascot -type f -name *.fasta -mtime +730
/nfs/mascot/sequence/Cdifile630/old/25374.C_difficile_6.fasta
/nfs/mascot/sequence/S_GP_0808/current/GeneDB_Smansoni_P.fasta
/nfs/mascot/sequence/S_GP_4.0h/old/GDB_Smansoni_P.v4.0h.fasta
```

Search and Count

grep

`grep [option]... [pattern] [file/directory]...`

Search text `files` for the `pattern` occurrence and output any line containing a match.

Some options:

- `-r, --recursive`
Search recursively in all files of the provided `directory`.
- `-i, --ignore-case`
Do not distinguish between upper and lower case characters.
- `-v, --invert-match`
Invert the sense of matching to select non-matching lines.
- `-c, --count`
Suppress normal output. Instead print the number of matches.

Search and Count

grep

```
$ grep -r TAF data/fasta_files
./AOAOAOMTS7.fasta:LVISMTFADDAGTAFIVVRNKHGETSASASLLMKSQQEMLY
./AOAOAOMTS7.fasta:KIAWYKDGKRIKHGERYQTAGLQDGRASLREGIYTAFASNI
./AOAOAOMTS7.fasta:IVAGSHTAFIQWFKDDQEISASEKYKFSFHSQLEGTDSGTY
./AOAOAOMTS7.fasta:QIEVTSSFTMLVIDNVTRFDSGRYNLTLETAFVRVLDSPSA
./P20848.fasta:IIRVPMINHLGRFDIHRDRELSTAFLAQHYVGNAPDPKKMWQ

$ grep -rc TA data/fasta_files
data/fasta_files/AOAOAOMTS7.fasta:158
data/fasta_files/P20848.fasta:1

$ grep -cv TA data/fasta_files/AOAOAOMTS7.fasta
443
```

Search and Count

WC

`wc [option]... [file]...`

Print the number of lines, words, and characters for each `file`.

```
$ wc P20848.fasta A0A0A0MTS7.fasta
 8      16      533      P20848.fasta
601     607     36662     A0A0A0MTS7.fasta
609     623     37195      total
```

Output Redirection

`command` > `file`

Redirect the output of `command` to the `file`.

```
$ find /nfs/mascot -type f -name *.fasta -mtime +730 > fastas
$ cat fastas
/nfs/mascot/sequence/Cdifile630/old/25374.C_difficile_6.fasta
/nfs/mascot/sequence/S_GP_0808/current/GeneDB_Smansoni_P.fasta
/nfs/mascot/sequence/S_GP_4.0h/old/GDB_Smansoni_P.v4.0h.fasta
```

Note that the > will overwrite any existing `file`.

You can use >> to append, i.e., add to an existing `file`.

That's it!

Commands and options explained:

Practical session

Outcomes

- Manipulate, i.e., create, delete, move, and rename files and directories.
- Inspect and edit files content.
- Search for and within files.
- Run scripts.
- Redirect commands output.

Structure

- Multiple choice questions (max 10 min).
- Hands-on (30 min).
