

Practical Linux

Practical 1

Connecting to Other Machines

Setup

Open <http://www.chiark.greenend.org.uk/~sgtatham/putty/latest.html> in your browser (you can google for **putty** for a quicker access).

Download **putty.exe** (alternative binary files, the SSH and Telnet client itself).

Connect to the education server

Run the downloaded **putty.exe** executable.

Enter the education server IP address **145.88.35.11** as destination.

Make sure that the **port number** is set to **22** and that **SSH** is selected as **connection type**.

Start the connection. Press “Yes” if the security alerts pop up.

Type your provided **username** and press enter.

Type your provided **password** and press enter.

You should now be connected to the education server.
